

Pro-Recon Sling

Ice Rescue System's Pro-Recon sling is designed to offer positive buoyancy to victims in water. The Pro-Recon sling is state of the art. There is no comparison to other similar devices available on the market. The Pro-Recon sling can be operated in many different capacities. It may be used as a straight extension from the rescuer to the victim, or shaped into a sling. The Pro-Recon sling can be added to our Rapid Transport Sled, or to the TAC+1 Reach Pole. It is the rescuer's choice of victim positive buoyancy. The Ice Rescue Systems Pro-Recon sling is specifically designed for "The Ultimate," in ease of operation. No more left or right shoulder placement. Simply secure it and go!
